Winner from Nanyang Technological University Recognised by World’s
Leading Academic Awards Programme

[03.10.17]

The Undergraduate Awards is delighted to announce that a student from Nanyang
Technological University is included in this year’s list of Global Winners.

This year UA received 6,472 papers to the programme and a student paper from Nanyang
Technological University has been selected by an international panel as the very best in its
category of Engineering.

As the leading academic awards programme for undergraduate students, our mission is to find
and celebrate outstanding undergraduate work.

UA assembles academics from around the globe to assess the work received and through a
rigorous judging process we find the best, most innovative, and creative undergraduate
coursework.

The top 10% of papers in each of the 25 categories are Highly Commended, and just one paper
from each category is named the UA Global Winner.

As the best paper in their category, Amber Tan has been named the Global Winner in
Engineering.

We hope you join us in celebrating this achievement.

“It is an immense achievement for undergraduate students to benchmark their work globally. To
be recognised for their creativity and innovative approach within their discipline can only propel
them to become global thinkers and potential change-makers. We are very appreciative of the
support of the global academic community who work closely with The Undergraduate Awards to
identify these impressive students” - Dr Brenda Cullen, Executive Director, The Undergraduate
Awards

“The Undergraduate Awards celebrates original, creative thinking among students, and the
world’s need for such critical capacity has never been greater” - Michael D. Higgins, President
of Ireland

More about UA for your press release:
The Undergraduate Awards is the world's largest international academic awards programme, recognising innovation and excellence at undergraduate level. Cited as the ultimate champion for high-potential undergraduates, UA identifies leading creative thinkers through their undergraduate coursework and provides top performing students with the support, network and opportunities they require to raise their profiles and further their career paths.
